WHY ACACIA WOOD? – Interesting Facts

Acacia wood
(Robinia pseudoacacia)

The robinia (acacia) is the most weather-resistant European wood species. Robinia wood requires no additional impregnation. It is one of the heaviest natural woods and is growing fast. Robinia wood is of course naturally protected from weather, fungi and insects. The wood quality is above average. But why using robinia (acacia) for fence and wooden piles? For outdoor use, you can appreciate the unique quality of this wood, which can last up to 50 years.

What shapes of wooden piles are available?

Our high–quality wood- and range piles are the perfect solution for different purposes: Besides the usage for ranges also an application in forest areas, vineyards, pomiculture plantation, as well as for bank fortification is possible. Even your garden will benefit from the qualities of robinia. Our piles are delivered without bark and pointed and are available in different diamters (up to 12cm) and lengths (up to 250cm).

The „robinia“ is also often called „acacia“!

Fence post/ wicker triangular acacia wood

Fence post, wicker triangular acacia wood *(Robinia pseudoacacia)*

<u>naturally grown</u>, in the designs triangular, semicircle and round
