

EcoTub® Plus

The ideal protector types for various climate conditions at the same price

EcoTub® light

→ **Type Standard**

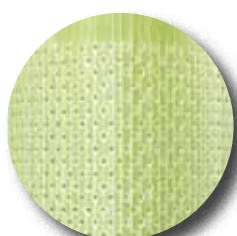

unperforated material from one end to the other, growth promoting

→ **Type Microvent: combines the advantages of tree protector tubes and tree shelters**

The lower section (25 to 30 cm) of the tree shelter is unperforated, the **upper section is perforated with holes**. Perforation facilitates plant transpiration (section to increase plant resistance), prevents accumulation of heat during day, and holds back humidity at night. The ideal temperature inside the protector is reached quick, not only when temperatures are high but also when they are low. Therefore, **growth is accelerated** and **planting failures are reduced to a minimum**.

EcoTub® Plus Type Standard

EcoTub® Plus Type Microvent

- **Round design enhances shelter stability** (storms!)
- **Greatly translucent** double layer material ensures **strong growth and healthy plants**
- Earthing up around shelter prevents chimney effect
- easy installation: Shelter **comes with ties for attachment to stake**. Holes in shelter for attaching shelter to stake (with cable ties or wire) are pre-stamped
- durable (UV stable): 4 to 5 years, material (PP) decomposes environmentally neutral afterwards

Note: same price for Standard and Microvent types

Standard item no.	Microvent item no.	item	price (in €)	
			excl. VAT	incl. VAT

		140 to 420 pcs.		

EcoTub® light

The inexpensive alternative with the same advantages as EcoTub® Plus but with a smaller growing space and thinner material

- lighter material, therefore not as stable as EcoTub® Plus, but **considerably less expensive**
- see Vine Protection page 86
