Special fraying protection for coniferous woods

MONO-Larch Spiral

Fraying protection

Small larch trees often have many branches and are medium sized. For that reason, the need for a special spiral for coniferous woods (larch, Scots pine, Swiss pine...) has developed.

Our Larch Spiral has been tested for several years and features the following characteristics:

height (standard): 60, 75, 90 cm

space between strips: 2,5 cm

width of strips: 2,8 cm

box: 800 pieces (8 x 100)

Your advantages:

- does not sag
- easy to install
- very good protection
- good durability, high stability
- favourably priced
- **UV stable** (durable several years)
- grows with tree

Protect your larch trees from fraying damage!
