

## TREE PROTECTOR TUBES - FINE MESHED

## Tailor-made protectors for deciduous woods at all locations

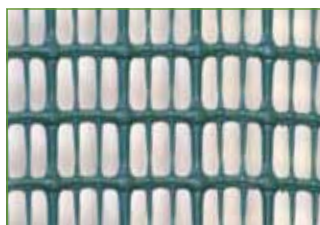

- Our tree protector tubes with fine meshes are tailor-made for deciduous woods and suitable for use at all locations, also and especially at hot sites (e.g. southern exposures), and for beeches
  - easy to attach to stakes (e.g. bamboo) with cable ties or wire
- Why is this protector's excellent climate regulation so beneficial for your plants?
- **high frost and winter hardiness** through very good autumn termination (lignification by autumn)
  - **no transpirational stress**
  - fine-meshed net, **side shoots cannot grow out through protector meshes**

Klimawit HQ®  
220/280Fine-meshed tree protector tube,  
tailor-made for deciduous woods

**Excellent length stability** provided for by horizontally and vertically running net additionally filled with fine-meshed bands

- **Break line (through lengthwise construction)** prevents that protector grows into bark (Tree can easily burst protector when it grows wider)
- Due to fine meshes, **protector keeps weeds (e.g. blackberry) out of growing space**
- **no growing-out of shoots through meshes**, better height growth
- **best bark protection**
- colour: green

- available as ready-to-use, pre-cut pieces (1.20 m long) or as tube rolls of 100 linear metres which allow you to determine the desired length of the protector tube individually
  - durable (UV stable): 6 to 8 years, afterwards material (PE) decomposes environmentally neutral
- growing space diameter: Klimawit HQ® 220** ca. 13 cm (suitable for deciduous woods, e.g. maple, ash)
- growing space diameter: Klimawit HQ® 280** ca. 18 cm (suitable for deciduous and coniferous woods, e.g. beech, oak, larch, spruce)
