Tree shelters

WitaEconom® - Tree Shelter

Your advantages:

- **great value for a low price – with the best protection**
- **WitaEconom®** is manufactured of less material and is therefore less **expensive**
- **advantages** similar to those of WitaGrow® / WitaPlantMV®
- strengthened **edges** provide an optimised stability on the ground (50/60/75)
- **protection from game and herbicides**
- side lengths: 8 to 8.7 cm
- type 40, 50, 60, 75, 120
- colour: type 40, 50, 60, 75 transparent blue = repellent effect
  type 40, 50, 60, 75 transparent green (upon request)
  type 120 transparent green (type 120)
- **UV stabilised**
- durable: 3 to 5 years
- environmentally neutral material: PP
- highly translucent

item no.	packing	price excl. VAT	price incl. VAT
111511	**Type 120** pal. 900 pcs. per piece from 450 pcs. per piece 25 - 425 pcs. per piece **Type 40, 50, 60, 75** see Vine Protection page 65		

Installation guidelines for tree protector tubes and tree shelters

1. If you order rolls, you can determine the length of the protectors/shelters yourself. Otherwise simply use the protectors shipped in the respective pre-cut pieces (1.20 m for roe deer, 1.50 m for red deer).
2. Drive the stake (e.g. bamboo, larch) about 25 cm into the ground, beside plant
3. Fold the protector, so that a square-like shape emerges
4. Slide the protector over the plant
5. Attach the protector to the stake using a cable tie (or cord, wire, …)
   Note: If you attach the protector at the new, folded edge, it keeps its shape perfectly (through this attachment method, the protector develops self-equilibrating stress)
