

TREE SHELTERS

For deciduous woods at locations ranging from cool to warm

→ The unperforated (closed) material creates a microclimate on the inside of the shelter which promotes plant growth. What are your advantages:

- growth promoting
- droplet irrigation through condensed water in the hollow chambers of the material
- shelters are highly stable

WitaPlant®

The shelter for deciduous woods used a million times

Growth promoting – Tests have shown that plants protected with WitaPlant often grow twice as fast as unprotected plants!

- with pointed side tips that ensure especially stable hold in the ground (only WitaPlant® 60 cm)
- **greatly translucent** double layer material provides **for strong growth and healthy plants**
- shelter **can be closed and re-opened** and is, therefore, **easy to re-use**, very stable

→ **patented micro-ventilation** – various ventilation holes can be opened when protector is used at warm sites to provide for a better ventilation and, thus, climate regulation

- large growing space diameter: 14 cm
- earthing up around shelter prevents chimney effect
- durable (UV stable): 4 to 5 years, afterwards material (PP) decomposes environmentally neutral
- colour: transparent green (except WitaPlant® 180 cm)
