**THE innovative water absorber and
fertiliser donor for your plants
in tablet form**

GroWit[®] STANDARD

Water absorber with standard fertiliser donor

GroWit[®] NATUR

Water absorber with natural fertiliser

GroWit[®] HYDRO

Water absorber

Sustainable assurance of the successful development of your plants

Our GroWit® plant tablets provide for improved growth rates and increased root development, making your plants more resistant to arid conditions.

GroWit® STANDARD

Water absorber with standard fertiliser donor

Constituents:
Hydrogel, osmo fertiliser,
vermiculite, magnesium stearate
• Super absorption capacity and
biocompatible

Illustration: actual size

GroWit® NATUR

Water absorber with natural fertiliser

Constituents:
Hydrogel, horn shavings, alginate,
clay, guano, magnesium stearate
• Super absorption capacity
and biocompatible

Illustration: actual size

GroWit® HYDRO

Water absorber

Constituents:
Hydrogel, vermiculite, clay,
magnesium stearate
• Super absorption capacity
and biocompatible

Illustration: actual size

PLEASE NOTE:

So that tablets are active in soil, they must be irrigated at least once (rain, watering etc.). They then swell and store moisture that they can release to plants.

Can be used for:

- Bare root forest plants
- Container plants
- Immature vines (when watering is not possible)
- Potted vegetable and other plants
- Flowering plants, shrubs, vegetables

One tablet can store up to 600 ml (0.6 litres) water!

Application rate:

- Bare root plants → 1 - 3 GroWit® tablets
- Container plants → 1 GroWit® tablet
- Pot sizes from 2 litres → 1 - 2 GroWit® tablets

Instructions for use:

Bare root plants: Place tablet in the planting hole so that it is below the root on planting.

Container plants: Place one tablet per plant at the bottom of each planting hole.

Pot plants: In the case of pots with a capacity of 2–2.5 litres, place one tablet left and right next to the root ball.

PLEASE NOTE: In order to become active in the soil, the tablet must receive water (rain, irrigation, watering, etc.). This allows it to swell, store moisture and release it back to the plant.

THE innovative sustainable water absorber and fertiliser donor for your plants - trial

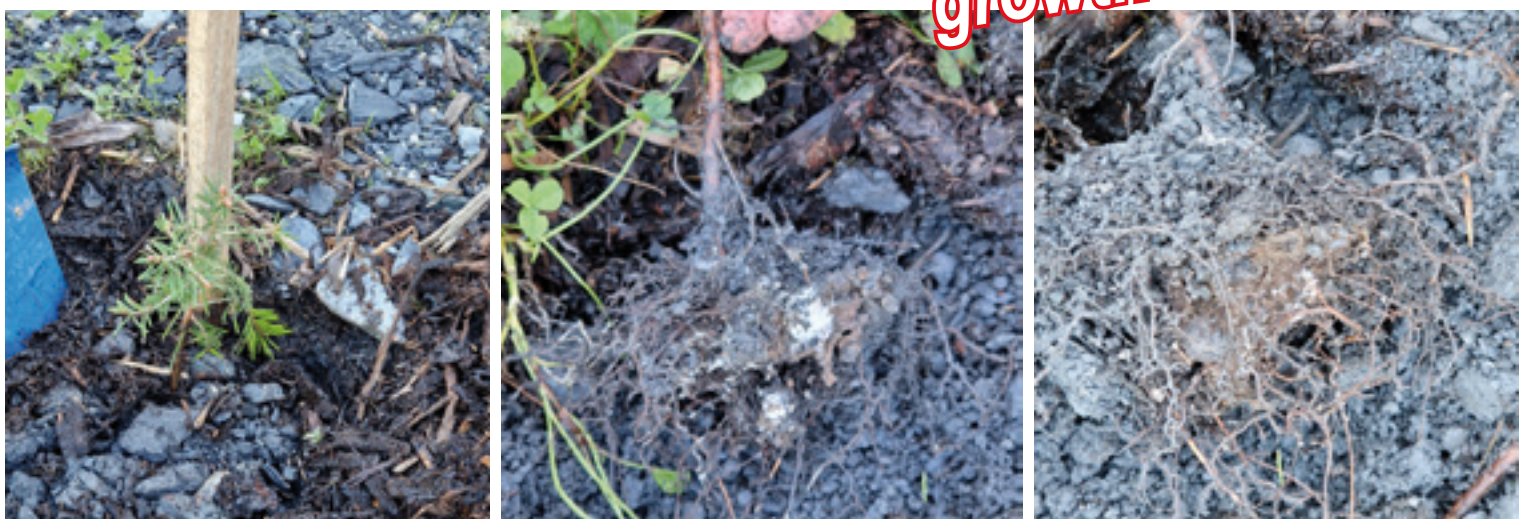

Analysis of the soil of the trial area

pH (Ca chloride)	7,6 mg	alkaline!!!
Phosphorus	7 mg	A / very low
Potassium	45 mg	A / very low
Magnesium	29 mg	B / very low
Humus (Corg.)	2,9 mg	very low
Total N-min.	9,8 mg	

By samples:

Potassium	from 45 mg - 190 mg
Phosphorus	from 7 mg - 63 mg

**97%
growth rate !**

Thanks to the use of GroWit® planting tablets, the roots of the newly planted forest plants exhibited excellent development. The resultant microbiome enabled the plants to exploit the relevant nutrients they required even in poor quality soil. The remarkable 97% growth rate of the 27,000 planted samples was attributable to the outstanding fertilising and water donation properties of the GroWit® planting tablets.

Please note that these results were obtained for a trial growing area. Actual results are dependent on plants, soil, location, season etc. and can therefore not be guaranteed.

With GroWit® planting tablets: Providing value and retaining value

Your advantages:

- Exceptional and sustainable water absorber
- One tablet can store up to 600 ml water!
- Superior fertiliser donor
- Even in extreme soil temperatures, the plant tablets are stable for up to 5 years.

Available sizes:

Small pack: 20 tablets

Large pack: 100 tablets

Sack: 250 tablet

Carton 4 x 250 tablets = 1000 tablets

1/2 pallet: 24 cartons = 24,000 tablets

One pallet: 48 cartons = 48,000 tablets

20 tablet small pack

100 tablet large pack.

250 tablet sack

Note: store in a dry place and protect against moisture.

Available from your specialist dealer.
